Summary

Mid-level procurement professional with extensive experience in IT and IoT hardware sourcing and vendor negotiation. Delivered cost-optimized purchase orders for IoT devices and cloud services using SAP and Oracle, and managed library acquisitions for 72 departments, handling over 1,000 items while reducing expenses. Proven ability to streamline procurement processes and improve supplier performance. Seeking to apply strategic sourcing expertise to drive cost savings and operational efficiency in a forward-looking organization.

EXPERIENCE

Amar InfoTech | IT Buyer

2021 - 2023

- Processed purchase requests into purchase orders (POs) using ERP systems (SAP, Oracle), ensuring accurate and timely procurement of IT hardware, software, and cloud services, which kept project timelines on schedule
- Issued RFQs and collaborated with engineering and manufacturing teams to gather procurement requirements and translate them into actionable purchase orders
- Negotiated pricing, lead times, and contract terms with domestic and international suppliers (including China), optimizing total cost of ownership (TCO) and ensuring supply chain reliability
- Managed invoice reconciliation and resolved procurement issues including invoice discrepancies and delivery delays throughout the order lifecycle
- Procured IoT devices, sensors, and microcontrollers (Arduino, Raspberry Pi, ESP32) for indirect purchasing needs across multiple projects in a manufacturing environment
- Supported strategic sourcing initiatives to reduce costs and improve procurement processes, achieving measurable savings across hardware, software, and cloud categories
- Implemented JIT procurement and inventory validation strategies, managing supplier relationships under category management guidance to ensure quality and on-time delivery

University of Dayton | Student Manager, Roesch Library

Apr 2024 - May 2025

- Managed procurement of library books and resources across 72+ departments, handling 1000+ items and tracking budgets and costs with SAP and MS Excel, which ensured timely availability of materials while staying within budget
- Coordinated with vendors for ordering, delivery, and replacement of materials to ensure uninterrupted availability
- Maintained detailed inventory records and monitored usage to optimize resource allocation
- Assisted in vendor evaluation and cost analysis, improving procurement efficiency and reducing expenses

PROJECTS

GridDB – GPU-Accelerated Data Visualization Dashboard | [Live Demo](#)

- Developed a GPU-accelerated data visualization dashboard to analyze procurement and IT asset data from CSV/Excel sources, visualizing spend trends, supplier performance, and inventory metrics across multiple departments
- Enabled data-driven budget optimization and vendor management using scatter plots, histograms, and KPI cards to detect anomalies, track usage, and forecast procurement needs efficiently

AI-Powered Procurement Spend Analysis Tool

2023

- Developed an AI-powered spend analysis tool to categorize procurement spend, detect anomalies, and optimize supplier management.
- Implemented ML clustering and NLP techniques to segment spend data and identify cost-saving opportunities.
- Built interactive dashboards for real-time spend visualization, supplier performance tracking, and predictive spend forecasting, achieving \$250K+ potential savings and 70% reduction in manual reporting.

EDUCATION

University of Dayton

Aug 2023 - May 2025

Master of Science, Computer Science

Dayton, OH

Government Engineering College

Aug 2017 - May 2021

Bachelor of Electronics and Telecommunication Engineering, Electronics and Telecommunication Engineering

India

TECHNICAL SKILLS

- **IT & Procurement:** IT & IoT Hardware Procurement, Cloud & Software Procurement (AWS, Azure, SaaS), ERP Systems (SAP, Oracle), Vendor Negotiation & Contract Management (Domestic & International), Strategic Sourcing & Cost Optimization, Inventory Management & JIT Procurement, Total Cost of Ownership (TCO) Analysis, Supplier Performance Management
- **IoT & Embedded Systems:** IoT Project Support (Smart Sensor Networks, Edge Computing, Industrial IoT Devices), Arduino, Raspberry Pi, ESP32, PLC, SCADA, HMI, LabVIEW
- **Data & Analytics:** Machine Learning (K-Means, Isolation Forest), NLP, Predictive Analytics, Data Analysis & Forecasting, Streamlit, Power BI, Tableau, MATLAB, SQL, MS Excel
- **Technical Tools:** AutoCAD, Minitab, MS Office Suite, SAP, MS Project, Python
